Report Overview

Chip-On-Board (COB) LED technology refers to a type of LED lighting solution where the light-emitting diodes (LEDs) are mounted directly onto a printed circuit board (PCB) without the need for individual packages or sockets. This technology allows for a more compact, efficient, and cost-effective design compared to traditional LED lighting methods. In COB LED technology, the LEDs are placed directly on the PCB, which serves as both the mechanical support and the electrical connection for the diodes. This design enables better heat dissipation, higher light output, and improved optical performance. COB LED technology is widely used in various applications such as general lighting, automotive lighting, and backlighting for displays, offering energy efficiency, long lifespan, and superior light quality.
