Report Overview

Chromium-Free Basic Bricks are a type of refractory brick used in industrial furnaces and kilns. They are called "chromium-free" because they do not contain chromium, which is often used in other types of refractory bricks for its high-temperature resistance properties. Instead, these bricks are made from materials such as alumina or magnesia, which provide good thermal shock resistance and can withstand the extreme temperatures found in industrial firing processes. They are commonly used in applications such as ceramics, glass, and steel manufacturing, where the absence of chromium is preferred for environmental and health reasons.
