## Abstracts

Church website builder software allows church administrators to create a website for their church or church community without needing extensive knowledge on how to build a website. Church website builder software provides users with templates and drag-and-drop capabilities to create and maintain a site easily. Church website builder software specifically caters to the religious communities surrounding a church, ministry, parish, synagogue, and more. These products are similar in some ways to website builder software, which caters to any industry professional creating a website. Features specific to church website builders vs. just website builders include the ability to add sermon-specific sections, donation-giving options, worship schedule lookup, etc., that would benefit a church community member. Church administrators primarily manage this software to share news and worship service-related information with their church community. Church community members are the primary users since they seek information about their church or parish and have easy access to the website once the site is live. Since church website builder software is an industry-specific tool, other software solutions may benefit a user of this type of software. For instance, church management software is a useful tool for assisting churches and other religious organizations with structuring and managing daily operations. There is also church presentation software that enables religious organizations to manage and present religious material during member gatherings such as worship services. Both software solutions may be used in conjunction with church website builder software as they all provide different functions but help support the management of a church and its community. The church website building software market is currently experiencing steady growth, driven by factors including the increasing demand for digital church management, the widespread adoption of online evangelism and event promotion, and the shared needs of volunteers and small churches for ease of use and cost sensitivity. Core capabilities focus on customizable templates and content management, event

calendars, donation and volunteer management, multilingual support, and adaptation to mobile-friendly and headless architectures. The market is primarily dominated by professional church/religious institution-guided solutions, supplemented by lightweight tools for community organizations. Competitive advantages lie in ease of use, rapid deployment, integrated donation payment and membership management, and compliance support for privacy and legal issues.

The global Church Website Builder Software market size was estimated at USD 227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
