Report Overview

Circumaural Micless Headphones are a type of headphones designed to cover the entire ear, providing a comfortable and immersive listening experience. These headphones are characterized by their large ear cups that completely enclose the listener's ears, offering excellent noise isolation and a spacious soundstage. The term "circumaural" refers to the full ear coverage, which is in contrast to "supra-aural" headphones that rest on the ears. The "micless" aspect indicates that these headphones do not come with a built-in microphone, making them more suitable for personal listening rather than communication purposes. They are often appreciated for their high-quality audio reproduction, comfort during extended use, and the ability to block out external noise, which is ideal for use in noisy environments or for those who prefer a more private listening experience.
