Abstracts

Civilian Turboshaft Helicopter are rotor aircraft used for non-military purposes. They are aircraft used by civilian aviation and private companies to transport passengers. This category also features helicopters for government institutions, emergency services and hospital services. A turboshaft engine is a variant of a jet engine that has been optimised to produce shaft power to drive machinery instead of producing thrust. Turboshaft engines are most commonly used in applications that require a small, but powerful, light weight engine, inclusive of helicopters and auxiliary power units. The market drivers for this product are the increasing demand for civilian helicopters in various sectors such as oil and gas, mining, forestry, and agriculture, the growing need for emergency medical services and disaster relief, and the rising preference for air travel over road travel. The constraints of this product are the high cost of acquisition and operation, the strict regulations and safety standards, and the environmental impact of noise and emissions. The future opportunities for this product are the development of new and advanced technologies such as electric and hybrid propulsion, autonomous and remote control, and digital connectivity, the expansion of the market in emerging regions such as Asia-Pacific and Latin America, and the innovation of new applications and segments such as urban air mobility and personal air vehicles .

The global Civilian Turboshaft Helicopter market size was estimated at USD 7963.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
