Report Overview

A Clamp-on Ultrasonic Flow Meter is a non-invasive, electronic device used for measuring the flow rate of liquids in pipes. It operates on the principle of ultrasonic waves, which are emitted and received by transducers that are clamped onto the outside of the pipe without the need for cutting or penetration. The meter calculates the flow rate by measuring the time difference and frequency shift of the ultrasonic waves as they travel along the pipe in the direction of flow and against the flow. This technology is particularly useful for applications where minimal disruption to the pipe is desired, such as in water and wastewater management, industrial processes, and heating, ventilation, and air conditioning (HVAC) systems. Clamp-on ultrasonic flow meters are known for their accuracy, ease of installation, and ability to measure a wide range of flow rates, making them a popular choice for fluid flow monitoring in various industries.
