Report Overview

Clean Agent Fire Extinguishers are specialized firefighting devices designed to extinguish fires without causing significant damage to sensitive equipment, electronics, or valuable assets. These extinguishers utilize clean agents, which are non-conductive, non-corrosive, and leave minimal residue upon discharge, making them ideal for use in environments where water or conventional fire extinguishers could cause harm. The agents are typically stored in pressurized containers and are released in a controlled manner to suppress fires effectively. Clean Agent Fire Extinguishers are commonly used in data centers, server rooms, laboratories, and other spaces where the preservation of equipment and data is critical. They are also preferred in situations where the risk of electrical hazards is high, as they do not conduct electricity and can be used safely around electrical fires.
