### Report Overview

Clip-on wheel weights are a type of automotive accessory designed to provide additional balance to a vehicle's wheels. These weights are attached directly to the wheel's rim, rather than being installed inside the wheel as is the case with traditional wheel weights. They are typically made from materials such as lead, zinc, or steel and are available in various sizes to accommodate different wheel types and weight requirements. Clip-on wheel weights are an alternative to permanent wheel weight installation, offering a more convenient and temporary solution for balancing wheels, especially during tire rotation or when a wheel's balance changes due to tire wear or damage. They are commonly used in automotive service centers and by individuals who need to maintain proper wheel balance for optimal vehicle performance and safety.
