Report Overview

A Closed Bus Duct is a type of electrical equipment designed to efficiently and safely distribute electrical power within a building or industrial facility. It consists of a sealed, enclosed structure made from metal, typically aluminum or galvanized steel, which houses multiple busbars that carry high currents from a central power source to various distribution points. The closed design of the bus duct offers several advantages, including protection against physical damage, moisture, and dust, which can lead to increased safety and reliability. It also reduces electromagnetic interference, minimizes noise, and provides a more organized and aesthetically pleasing appearance compared to open bus ducts.
