Abstracts

Closed Cell Polyurethane Rigid Foam is a type of foam insulation material that is widely used in construction and other industries. It is composed of a rigid and durable form of polyurethane, which is a polymer made by reacting a polyol with an isocyanate. The 'closed cell' aspect refers to the structure of the foam cells. In closed cell foam, the cells are fully enclosed, preventing the passage of air and moisture. This results in excellent insulation properties, as it effectively resists heat flow and provides a high level of thermal resistance. Closed Cell Polyurethane Rigid Foam is known for its high strength, dimensional stability, and resistance to moisture absorption. It is commonly used in applications such as insulating walls, roofs, and foundations to enhance energy efficiency and reduce airflow. Additionally, it can provide structural support and act as a moisture barrier.

The global Closed Cell Polyurethane Rigid Foam market size was estimated at USD 4560.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
