Report Overview

A Closed Diving Rebreather, also known as a Closed-Circuit Rebreather (CCR), is an advanced type of underwater breathing apparatus that recycles the diver's exhaled gas by removing carbon dioxide and replenishing it with a precise amount of oxygen, enabling longer and deeper dives with minimal gas consumption. Unlike open-circuit systems that release exhaled gas into the water, CCRs maintain a closed loop, making them highly efficient and suitable for technical, scientific, and military diving.
