Abstracts

Artificial pancreas refers to the use of electronic machinery to replace the endocrine function of the pancreas. Since islets are the endocrine part of the pancreas, the correct name for this artificial organ should be artificial islets. However, the traditional name 'artificial pancreas' is still commonly used internationally. The artificial pancreas closed-loop system is an automatic insulin delivery device (AID) that can automatically infuse basal insulin to make our nighttime blood sugar more stable. Although insulin needs to be infused manually during meals, its operation interface will provide intelligent Mealtime insulin dosing recommendations. The system consists of three elements, including a dynamic blood glucose monitoring system, an insulin pump and a central algorithm control system, so that the system can determine the insulin infusion dose based on real-time dynamic blood glucose monitoring results.

The global Closed Loop Artificial Pancreas System market size was estimated at USD 1450.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
