Report Overview

Closed Loop Spray Dryer is a specialized type of drying system that is designed to dry products in a solvent-based solution. This spray dryer uses inert gases (such as nitrogen) or air as the drying medium, and the gas circulates within the dryer, hence it is referred to as a closed-loop system. Inert nitrogen reduces the risk of explosions or fires caused by solvent vapor heating. After drying in the drying chamber and passing through a bag filter, the solvent vapor is transported along with nitrogen through a pre-cooler and condenser to recover the solvent. The solvent-free gas is then heated and recirculated back into the drying chamber.
