Abstracts

Closed-loop wastewater recycling system is a comprehensive system that treats and recycles wastewater within a closed circuit. It involves multiple stages of wastewater treatment, such as filtration, biological processes, and disinfection, to remove impurities and contaminants. The treated wastewater is then reused for specific purposes, such as irrigation, flushing, or industrial processes, reducing the demand for fresh water and promoting sustainable water management practices. The closed-loop design ensures that the treated wastewater remains within the system and does not discharge into the environment.

The global Closed Loop Wastewater Treatment System market size was estimated at USD 2850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
