Cloud Managed Wi-fi (Wireless LAN) provides private wireless access for people and a public WiFi network for guests in one fully managed, end-to-end solution. Cloud-managed Wi-Fi simplifies the deployment and management of Wi-Fi networks by eliminating the need for on-premises controllers. Even small IT departments can remotely and quickly manage whole Wi-Fi-enabled campuses and buildings, guest networks, and wireless access points (APs) with cloud-managed Wi-Fi. The capacity to manage Wi-Fi, wired, and SD-WAN network infrastructure as a cloud-based service is referred to as ?cloud-managed networking.? Cloud-managed Wi-Fi can make it easier for shops to collect comprehensive in-store data by monitoring foot traffic, creating shopper heat maps, logging dwell time in a particular aisle, and verifying which products were taken out of stock or returned (smart shelving). Initially, maintaining a few access points (AP) to provide wireless hotspots for a limited number of employees was all that the WLAN was responsible for. Now, however, the WLAN is required to manage hundreds of thousands of users and give complete enterprise-wide coverage. Cloud Managed Wi-fi solutions are offered by qualified service providers to manage their Wireless LAN in order to manage this new scale of wireless connectivity and to guarantee that all users have instant and safe connectivity. The complete WLAN lifespan may be covered by these solutions.

The global Cloud Managed Wi-fi market size was estimated at USD 4374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.30% during the forecast period.
