Report Overview

Cloud native network firewalls are applications or services that run directly from your cloud (e.g., AWS). These virtual services use automatic discovery to locate all the entities in your environment, giving you a visual network topology of containerized apps and hosts. Cloud native firewalls use this discovery process to identify agents they can use that run inside each host, function, or VM. You can create microsegments and firewall rules that are bound to these agents instead of ephemeral IP addresses.
