Report Overview

A cloud-native network function (CNF) refers to a network function virtualized and optimized for deployment in cloud environments, leveraging microservices architecture, containerization, and orchestration platforms like Kubernetes. CNFs are designed to be lightweight, scalable, and resilient, enabling efficient deployment, management, and scaling of network services such as routing, firewalling, and load balancing in cloud-native infrastructures. By decoupling software from underlying hardware, CNFs promote agility, flexibility, and cost-effectiveness in delivering network services across distributed and dynamic cloud environments.
