## Abstracts

Co-browsing software, also known as collaborative browsing software or co-surfing software, enables customers to share their screen and allows agents to jointly navigate a web page, which provides real-time customer support. This process happens instantly and does not require downloading software or installing extensions. The customer support agent initiates a co-browsing session with the customer, and by accepting the invite, the agent can then get an accurate visual representation of the customer's view of the website. This empowers the agents to take temporary control of the customer's screen to guide them through complex transactions and processes when placing a purchase order. The co-browsing software market is experiencing rapid growth due to increased demand for personalized and efficient customer interactions in the digital age. Some of the key factors driving the market growth are: The rising adoption of co-browsing software by large enterprises and SMEs across different regions to improve customer satisfaction, loyalty, and retention. The growing trend of BYOD (Bring Your Own Device) and remote work, which creates a need for co-browsing software to facilitate seamless communication and collaboration among distributed teams and customers. The advancement of co-browsing technology, such as code-less proxy co-browsing, which enables co-browsing without any downloads, installations, or plug-ins, and supports complex web pages and media objects. The integration of co-browsing software with other visual engagement technologies, such as live chat, video chat, screen sharing, and augmented reality, to provide a comprehensive and immersive customer service and support solution.

The global Co-Browsing Software market size was estimated at USD 889.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
