Abstracts

Co coated spherical nickel hydroxide coats the surface of particles with cobalt hydroxide when producing nickel hydroxide, which is mainly used as a cathode material for nickel-metal hydride batteries. Co coated spherical nickel hydroxide is widely used in the production of positive electrodes in Nickel-Metal Hydride (NiMH) batteries, commonly found in electric vehicles (EVs), power tools, and hybrid vehicles. The spherical morphology allows for better charge/discharge cycles, improving battery performance, longevity, and energy density. Market Drivers The increasing demand for EVs and hybrid vehicles is a significant driver for co coated spherical nickel hydroxide, as it is a key component in NiMH batteries. As governments push for cleaner energy and the shift towards electric mobility gains momentum, the need for higher-performing batteries is growing. In addition, in 3C digital products such as mobile phones, digital cameras, and laptops, although lithium batteries dominate, nickel-metal hydride batteries are still favored in certain high-energy density applications due to their long service life and environmental protection characteristics. With the increasingly stringent environmental regulations, manufacturers are also gradually adopting more environmentally friendly nickel-metal hydride batteries. Growing of downstream industries will promote the market of co coated spherical nickel hydroxide
