Abstracts

Co-packing, short for contract packaging, refers to a service provided by a third-party company that handles the packaging of products on behalf of another business. This service is often utilized by companies looking to outsource the packaging process to focus on their core activities such as product development, marketing, and distribution. Businesses often use co-packing services to save time, reduce costs, and access specialized expertise in packaging that they may not have in-house. This arrangement can be beneficial for both small startups and larger companies looking to expand their production without investing heavily in packaging infrastructure. The co-packing service market is experiencing robust growth globally, driven by factors such as the rise of e-commerce and the increasing demand for customized packaging. North America is the most significant shareholder in the global contract packaging and fulfillment services market. There are many large-scale food and beverage, pharmaceutical, and beauty companies in this region, and they often cooperate with local contract packaging and fulfillment service providers. It is expected to grow at a CAGR of 9.89% during the forecast period. Driven by political pressure and consumer perception of packaging, the EU is strengthening laws to increase recycling rates, recycled content, and reduce single-use plastics. This has promoted the demand for sustainable packaging services and also influenced the development trend of the co-packing service market in Europe. With the rapid development of the manufacturing industry in countries such as China and India, and the continuous growth of the e-commerce market, the demand for co-packing services in the Asia-Pacific region is also increasing. The region has a large-scale consumer market and a relatively low-cost labor force, which has certain advantages in the development of the co-packing industry.

The global Co-Packing Service market size was estimated at USD 8309.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
