Report Overview

Co-Processed Lactose Starch is a specialized food ingredient that combines lactose and starch through a unique processing technique. It is designed to provide a range of benefits for various food products, particularly in the confectionery and pharmaceutical industries. This ingredient leverages the natural sweetness of lactose, derived from milk, with the functional properties of starch, which is a complex carbohydrate commonly found in plants. The co-processing method enhances the solubility, stability, and texture of the final product, making it suitable for applications where a balance of sweetness and bulk is required. Co-Processed Lactose Starch can improve the mouthfeel, reduce hygroscopicity, and offer a cost-effective solution for formulating dairy-based or sugar-free products. It is often used in the production of candies, chocolates, and pharmaceutical tablets to enhance taste, texture, and shelf life.
