Report Overview

CO₂-based plastics are a type of polymer material derived from carbon dioxide (CO₂) as a primary feedstock. These plastics are synthesized through a chemical process where CO₂ is converted into polymers, reducing the reliance on petroleum-based feedstocks and potentially lowering the carbon footprint associated with traditional plastics. CO₂-based plastics can be used in various applications, such as packaging, automotive parts, and consumer goods, offering a more sustainable alternative to conventional plastics. The production of CO₂-based plastics not only contributes to the reduction of greenhouse gas emissions but also represents an innovative approach to circular economy principles by utilizing a byproduct of industrial processes in the creation of new materials.
