Abstracts

The carbon dioxide refrigeration system market is witnessing a rapid growth trend across the globe. This is mainly due to concerns about environmental protection and energy efficiency, as well as restrictions on hydrofluorocarbon (HFC) refrigerants. Especially in Europe, North America, and Asia Pacific, the carbon dioxide refrigeration system market dominates. Driven by stringent environmental regulations and government subsidies in these regions, businesses and households are adopting CO2 refrigeration systems to reduce energy consumption. Other regions such as the Middle East and Africa are also gradually starting to pay attention to CO2 refrigeration systems, but the market share is relatively small. Industries covered by the CO2 refrigeration system market include retail, food and beverages, pharmaceuticals, logistics and transportation, and others. In these industries, the requirements for energy efficiency and environmental protection are high, so the demand for CO2 refrigeration systems is also high. With continuous advancement in technology and gradual reduction in cost of CO2 refrigeration systems, the market for CO2 refrigeration systems is expected to continue to grow and gradually replace conventional HFC refrigeration systems.

The global Co2 Carbon Dioxide Refrigeration System market size was estimated at USD 1850.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
