## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CO<sub>2</sub> Separation Membrane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A CO<sub>2</sub> Separation Membrane is a type of selective barrier material designed to separate carbon dioxide (CO<sub>2</sub>) from gas mixtures, such as natural gas, biogas, syngas, or flue gas. These membranes exploit differences in molecular size, solubility, and diffusivity to allow CO<sub>2</sub> to permeate faster than other gases (like CH<sub>4</sub>, N<sub>2</sub>, or H<sub>2</sub>), enabling efficient gas purification and carbon capture. In 2024, global CO<sub>2</sub> Separation Membrane production reached approximately 212.4 K units, with an average global market price of around US\$ 1109 per unit. The CO<sub>2</sub> Separation Membrane market focuses on advanced membrane technologies designed to selectively separate carbon dioxide from gas mixtures in industries such as natural gas processing, biogas upgrading, carbon capture and storage (CCS), and industrial flue gas treatment. These membranes, typically made from polymers, mixed-matrix materials, or inorganic composites, provide advantages such as high selectivity, energy efficiency, compact design, and lower operational costs compared to traditional separation methods like amine absorption or cryogenic distillation. Market growth is driven by increasing global emphasis on reducing greenhouse gas emissions, stricter environmental regulations, and rising demand for clean energy, particularly in sectors like power generation, oil & gas, and chemicals. The development of next-generation membranes with higher durability and scalability is further accelerating adoption, making CO<sub>2</sub> separation membranes a key enabler of carbon reduction strategies and the transition toward a low-carbon economy.

The global CO<sub>2</sub> Separation Membrane market size was estimated at USD 236.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00%

during the forecast period.
