Abstracts

Coal briquetting crushing activated carbon is made from coal raw materials through a series of processes. Firstly, the coal raw materials are carbonised at high temperature under air-isolated conditions, and then oxidatively activated with gases (e.g., air, carbon dioxide, water vapour or a mixture of all three) at a certain temperature in order to produce a well-developed structure with micropores. Finally, it undergoes briquetting and crushing processes to obtain the desired particle shape and size.

The global Coal Briquette Crushing Activated Carbon market size was estimated at USD 480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.45% during the forecast period.
