## Abstracts

Coalescing agents are basically solvents that help optimize the film formation process of polymer emulsion. Coalescing agents are used as an additive to bring down the minimum film formation temperature, develop optimized film coherence, and improve film properties such as resistance, mechanical properties, abrasion resistance, and appearance. Coalescing agents are solvents used in dispersion paints for optimizing the film formation process of the polymeric binder particles. The growing demand for paints & coatings in the construction, automotive, marine, aerospace, and packaging industries is expected to fuel the market growth during the forecast period. Increasing construction activities have propelled the demand for paint & coatings. For instance, Walt Disney World construction project in Saudi Arabia value USD 64 billion, London Cross rail Project worth over USD 23 billion and Hong Kong-Zhuhai-Macao Bridge in China are few of the big construction projects. Thus, the increasing number of construction projects across the globe is projected to accelerate the demand for paint & coatings to protect buildings and infrastructure from weathering, which is expected to boost the growth of the global coalescing agents market during the forecast period.

The global Coalescing Agents market size was estimated at USD 1273.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
