### Report Overview

Coating Thickness Handheld Gauges are portable, electronic devices designed to measure the thickness of various types of coatings applied to surfaces. These gauges are typically used in industries such as manufacturing, construction, and automotive, where the quality control of protective coatings is crucial. They function by employing non-destructive testing methods, such as magnetic induction or eddy current, to determine the thickness of non-magnetic coatings on magnetic materials or magnetic coatings on non-magnetic materials, respectively. These handheld gauges offer quick and accurate measurements, often with digital displays for easy reading, and are compact enough to be used in the field or in a workshop setting. They are essential tools for ensuring that coatings meet specified thickness requirements, which is vital for maintaining the integrity and longevity of the coated surfaces.
