Report Overview

Coaxial wire and cable, often referred to as coax cable, is a type of electrical cable that consists of an inner conductor surrounded by a concentric conducting shield, with an insulating dielectric material separating the two. This design allows for efficient transmission of high-frequency signals with minimal signal loss and interference. Coaxial cables are widely used in various applications, including telecommunications, cable television, computer networks, and radio frequency (RF) transmission systems. The shielded structure of the coaxial cable helps to protect the signal from external electromagnetic interference, making it ideal for applications where signal integrity is critical. The performance of a coaxial cable can be characterized by its impedance, attenuation, and bandwidth, which are crucial factors in determining its suitability for specific applications.
