Report Overview

Cockpit Voice and Data Recorders (Black Box) are electronic devices specifically designed for the aviation industry, primarily used in commercial and military aircraft. These devices serve two main functions: recording the cockpit audio, including conversations between pilots, air traffic control communications, and ambient noise, and capturing flight data such as altitude, speed, and engine performance. The Black Box is crucial for accident investigation and flight safety analysis, as it provides valuable insights into the events leading up to a crash or incident. Typically, aircraft are equipped with two types of recorders: the Cockpit Voice Recorder (CVR), which stores audio data, and the Flight Data Recorder (FDR), which logs technical information.
