Report Overview

Coil spring washers, also known as helical spring washers or split lock washers, are mechanical devices used in various fastening applications to prevent bolts or nuts from loosening due to vibration or torque. They are made from a coil of metal, typically steel, that is cut at an angle to create a split in the washer. When the washer is compressed during tightening, it exerts a spring-like force against the nut or bolt, increasing the friction between the threads and enhancing the overall locking effect. This helps to maintain the integrity of the assembly and prevents the fasteners from coming undone under stress.
