Phase change materials (PCMs) are a type of thermal storage chemical material, characterized by the ability to change the state of matter and provide latent heat at a constant temperature. Phase change materials can store heat by utilizing their own phase changes when absorbing heat, and then perform a reverse phase change when heat is needed to release the heat. Phase change materials can be divided into three categories based on their chemical composition: inorganic phase change materials, organic phase change materials, and composite phase change materials.

The global Cold Chain Logistics Phase Change Materials market size was estimated at USD 2150.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
