Cold chamber solves the corrosion problem by separating the melt pot from the injector components. In the cold-chamber process, metal is transferred by ladle, manually or automatically, to the shot sleeve. Actuation of the injection piston forces the metal into the die?this is a single shot operation. This procedure minimizes the contact time between the hot metal and the injector components, which helps to extend their operating life.

The global Cold Chamber Squeeze Casting Machine market size was estimated at USD 315.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
