Abstracts

A Cold In-place Recycling (CIR) Machine is a specialized construction equipment used in pavement rehabilitation and maintenance. It employs a cold process to recycle and rejuvenate existing asphalt pavement materials without the need for extensive heat. The CIR machine typically operates by milling the top layer of the old asphalt, mixing it with recycling agents or additives, and then placing the recycled mixture back onto the road surface. This process enhances sustainability by reusing existing materials, reduces the need for new asphalt production, and provides a cost-effective method for improving the structural integrity of roadways.

The global Cold In Place Recycling Cir Machine market size was estimated at USD 285.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
