## Abstracts

A cold in-place recycling (CIR) train is a specialized construction equipment used in road rehabilitation and maintenance projects. It consists of a series of integrated machines that work together to recycle and reconstruct existing asphalt pavement in situ without the need for traditional hot-mix asphalt plants. The CIR train typically includes equipment for milling and pulverizing the existing pavement, mixing it with new asphalt emulsion or foamed asphalt, and then placing and compacting the recycled material back onto the roadway surface. This process rejuvenates the existing pavement, improves its structural integrity, and extends its service life while minimizing material waste and environmental impact.

The global Cold In Place Recycling Cir Train market size was estimated at USD 480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
