Abstracts

Liquid-cooled servers are servers that have liquid injected into them and use heat exchange to remove heat from them. In terms of the physical form of the servers, there are two types: cold plate liquid-cooled servers and fully immersed liquid-cooled servers. As artificial intelligence companies and organizations place increasing demands on the construction and computing power of intelligent computing centers, the energy consumption of IT equipment in such data centers has increased significantly, and efficient cooling systems are needed to maintain a suitable operating temperature.
