Report Overview

Colestipol Hydrochloride is a bile acid sequestrant medication, used primarily in the treatment of hypercholesterolemia, a condition characterized by elevated levels of cholesterol in the blood. It functions by binding to bile acids in the intestine, thereby preventing their reabsorption and promoting their excretion from the body. This process reduces the amount of cholesterol available for absorption, leading to a decrease in low-density lipoprotein (LDL) cholesterol levels, which is often referred to as "bad" cholesterol. Colestipol Hydrochloride is typically prescribed as an adjunct to diet and exercise in managing hyperlipidemia, and it may also be used in combination with other lipid-lowering medications to achieve optimal cholesterol control. It is important to note that Colestipol Hydrochloride is not absorbed systemically and thus has minimal systemic side effects, but it can cause gastrointestinal symptoms such as constipation or bloating.

In 2024, the global Colestipol Hydrochloride market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
