### Report Overview

A collinear array antenna is an antenna array composed of two or more antenna units (such as half-wave dipoles) arranged along the same straight line or axis. These antenna units can achieve higher gain, narrower beam width and lower side lobe level than a single antenna through mutual coupling and collaboration, thereby forming a more concentrated radiation or reception capability in a specific direction. Collinear array antennas are widely used in communication, radar, navigation, satellite communication and other fields. In communication systems, collinear array antennas can be used to improve the coverage and signal quality of base station antennas; in radar systems, they can be used to improve the detection distance and resolution of radars; in satellite communications, collinear array antennas help achieve more efficient signal transmission and reception.
