Report Overview

A Collagen Dental Membrane (or Collagen Dental Mask) is a type of biocompatible material used in dental surgeries, particularly in procedures related to guided tissue regeneration (GTR) and guided bone regeneration (GBR). These membranes are made from collagen, a natural protein found in connective tissues, and are designed to support the healing process by acting as a barrier that prevents the ingrowth of soft tissue into the bone defect site. This allows for the proper formation of new bone tissue.
