### Report Overview

Colon Transit Markers, also known as radiopaque markers or intestinal markers, are medical devices used in the field of gastroenterology. These markers are small, non-absorbable capsules or pills that are ingested by the patient and then pass through the gastrointestinal tract. They are designed to be visible under X-ray or other imaging techniques, allowing healthcare professionals to track the progress and movement of the markers within the colon. This helps in assessing the colon's motility, identifying areas of slow transit, and diagnosing conditions such as constipation or intestinal disorders.
