Report Overview

Colored Rubber Granules are small, uniformly-sized particles made from recycled or virgin rubber materials. These granules are specifically engineered to provide a durable, safe, and visually appealing surface for various applications. They are commonly used in the construction of sports fields, playgrounds, and other outdoor recreational areas due to their shock-absorbing properties and resistance to wear and tear. The granules come in a wide range of colors, allowing for the creation of multi-colored surfaces or the addition of color to existing ones. They are also known for their ability to provide traction and reduce the risk of slips and falls, making them a popular choice for safety-conscious environments. The production process of colored rubber granules involves cleaning, grinding, and coloring the rubber, ensuring that the final product is free from impurities and has a consistent texture and color.
