### Report Overview

Colored smoke grenades are pyrotechnic devices designed to produce dense, vividly colored smoke for signaling, marking, or entertainment purposes. These grenades typically contain a mixture of a dye compound and an oxidizer, which, when ignited, generates a sustained plume of smoke in hues such as red, green, blue, yellow, or purple. They are widely used in military and law enforcement operations for target designation, crowd control, and training exercises, as well as in civilian applications like photography, airsoft/paintball games, and special effects in films or live events. The smoke is non-toxic and dissipates quickly, making it safe for controlled environments. Demand is driven by tactical needs, recreational activities, and media production, with variations in burn time, intensity, and color options catering to diverse user requirements. Regulatory oversight varies by region, with restrictions on certain chemical formulations to ensure safety and environmental compliance.
