Report Overview

Colour CVD Diamonds, also known as Chemical Vapor Deposition Diamonds, are a type of laboratory-grown diamonds that are created through a high-pressure, high-temperature process. These diamonds are synthesized by depositing carbon atoms onto a substrate in a controlled environment, resulting in a diamond with a crystalline structure similar to that of natural diamonds. The term "Colour" in the product name refers to the fact that these diamonds can be produced in a range of colors, from colorless to various shades of yellow, blue, pink, and more, depending on the specific growth conditions and post-growth treatments.
