These lifts consist of two or more vertical columns with synchronized lifting arms or platforms, offering stability and weight distribution for various vehicle types, from passenger cars to light-duty trucks. They are commonly used in auto repair shops, dealerships, and fleet service centers due to their efficiency, space-saving design, and lifting capacity, which typically ranges from 7,000 to 18,000 pounds. Available in both symmetric and asymmetric configurations, column lifts provide flexibility in vehicle positioning, allowing technicians better access to undercarriage components. Advanced models incorporate safety features such as automatic locking systems, overload protection, and hydraulic fail-safes to prevent accidents.
