## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Commercial ECDIS System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Commercial ECDIS (Electronic Chart Display and Information System) is a digital navigation system designed for merchant vessels, integrating electronic navigational charts (ENCs), real-time positioning, route planning, collision alerts, and voyage recording. Compliant with IMO standards, it replaces traditional paper charts, enhances navigational safety and efficiency, and supports data fusion with other onboard systems (e.g., radar, AIS) for intelligent voyage management. The commercial ECDIS market is expanding steadily, driven by IMO mandates (e.g., SOLAS) and the shipping industry's digitalization demands. Key players like Transas (W?rtsil?), Furuno, and Raymarine focus on high-precision, cloud integration, and AI-assisted decision-making. Future trends include integration with autonomous ship technologies, AR interfaces, and big data-based route optimization. However, high costs and low penetration in small vessels remain challenges, though emerging markets (e.g., Asia, Africa) offer growth potential.

The global Commercial ECDIS System market size was estimated at USD 1271.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
