Abstracts

Commercial Elevator Counterweights refer to the counterweight system used to balance the weight of the elevator load box. Its main function is to balance the weight of the elevator load box to reduce the load that the elevator machine needs to bear. When passengers or cargo enter the elevator, the weight of the load box increases, and the counterweight system reduces the same weight accordingly to maintain the overall balance of the elevator. This can reduce the energy consumed by the elevator machine, extend its service life, and improve the operating efficiency and stability of the elevator.
