Report Overview

A Commercial Grease Trap is a specialized plumbing device designed to intercept and contain grease, fats, and oils (GFO) from commercial kitchen operations before they enter the sewer system. It is typically installed underground or within a drainage pit, and its primary function is to prevent the buildup of these substances in the sewer lines, which can lead to blockages, costly repairs, and environmental pollution. The trap works by allowing the grease to solidify and accumulate within its chamber, while allowing water and other liquid waste to flow through to the sewer. Regular maintenance, such as pumping out the accumulated grease, is essential to ensure the efficient operation of the grease trap and to comply with local regulations.
