Abstracts

Industrial and commercial energy storage solutions are comprehensive systems integrating energy storage equipment (battery systems), power electronics (PCS), energy management systems (EMS), and supporting facilities. Their core goal is to achieve "peak shaving" for industrial and commercial electricity users, such as factories, shopping malls, and industrial parks. This means charging during off-peak hours and discharging during peak hours, significantly reducing both peak and base electricity costs. Furthermore, by integrating with distributed photovoltaics, the system increases green electricity self-consumption and ensures reliable power supply to critical loads. Ultimately, these customized energy services help users reduce electricity costs, optimize their energy mix, and enhance power resilience. The future development prospects of industrial and commercial energy storage solutions are extremely promising. They are evolving from simple peak-valley arbitrage tools to a key component supporting the new power system. With the continued increase in the proportion of new energy installed capacity and the deepening of power market reforms, the driving force behind these solutions will shift from initial policy subsidies to diversified market value. In the future, energy storage technology will see the coexistence and integration of diverse technology approaches, such as lithium batteries and flow batteries. System costs will continue to decline with economies of scale, and their economic benefits will become increasingly prominent. Under mature mechanisms such as virtual power plants and electricity spot markets, industrial and commercial energy storage can obtain richer revenue channels by participating in frequency regulation auxiliary services and demand-side response. Its core value lies in providing flexibility and stability support for the grid connection of a high proportion of renewable energy, and ultimately deeply integrating into the integrated energy ecosystem of "source, grid, load and storage", becoming an important infrastructure for industrial and

commercial enterprises to achieve energy cost management, participate in carbon emission reduction and enhance comprehensive competitiveness. The market space is expected to usher in explosive growth.

The global Commercial and Industrial Energy Storage Solution market size was estimated at USD 6251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
