Report Overview

Commercial phosphate fertilizers are manufactured using phosphate rock. Approximately two-third of the world's phosphate resources are derived from sedimentary and marine phosphate rock deposits. Ground rock phosphate has been used as a source of phosphorous for soils in the past. This is attributed to the increased demand from agricultural producers for a fertilizer that provides necessary nutrients such as nitrogen and potassium. Agricultural products, such as fruits, vegetables, cereals, and pulses, are major application areas. The use of phosphorous fertilizers in various grains promotes root growth, improves crop quality, and enhances stalk strength.
