Report Overview

A Commercial Salt Chlorine Generator is a specialized water treatment device designed for large-scale applications such as swimming pools, water parks, and other commercial aquatic facilities. This system harnesses the power of electrolysis to produce chlorine from common salt (sodium chloride) dissolved in water, eliminating the need for hazardous and environmentally harmful chemicals. The generator typically consists of a control unit, a cell containing titanium electrodes, and a circulation pump. When the saltwater solution passes through the cell, the electrodes generate chlorine gas, which is then dissolved back into the water to sanitize and maintain water quality. This process not only provides a safer and more sustainable alternative to traditional chlorine products but also results in softer, clearer, and more comfortable water for users.
