### Report Overview

A commercial vehicle air brake system is a critical safety mechanism used in trucks, buses, and other heavy-duty vehicles to ensure effective braking performance. This system utilizes compressed air to apply pressure to the brake pads, causing the vehicle to slow down or stop. Key components include an air compressor, air reservoirs, brake chambers, valves, and brake drums or discs. When the driver presses the brake pedal, air from the reservoirs is directed through a series of valves to the brake chambers, where it actuates the brake mechanisms. Air brake systems are preferred in commercial vehicles due to their ability to provide consistent and powerful braking force, their self-adjusting capabilities, and the safety feature of automatically applying the brakes in case of an air pressure loss, preventing vehicle runaway.
